## The Award Winning Design Of This Legacy ER Opens Its Doors In Frisco, Texas

5G was Awarded 1st place in the 2007 Healthcare Environment Awards Competition sponsored by Contract Magazine and the Center for Health Design for their Conceptual Design of this Legacy ER Center. It is now open and operational.

Located just north of Dallas, Texas in the community of Frisco, this Emergency Care facility represents a departure from conventional healthcare design sensibilities. This 6,175 sf facility offers an abundance of natural light not often associated with healthcare. This is achieved by fully glazed reception and waiting areas. Various types of transparent and translucent material emerge from the reception into the corridor in keeping with the organic flow. The space is highly efficient for its many purposes and is compliant with federal privacy guidelines. The main circulation corridor has been organized to create an open environment. The laboratory is enclosed with a combination of translucent green resin panels and etched glass. The progressive combination of materials and spatial organization produces a compliant and calming place of refuge for emergency treatment.
